| I. | INTRODUCTION: | . 1 |
|------|--------------------|-----|
| II. | GENERAL COMMENTS: | . 1 |
| III. | SPECIFIC COMMENTS: | . 5 |

I. INTRODUCTION: -

The current Securities and Exchange Board of India (Listing Obligations and Disclosure Requirements) Regulations, 2015 ("LODR Regulations") Regulation 7(1)(c) holds that only promoters must hold shares in dematerialized form prior to filing for Initial Public Offering ("IPO"). However, it is silent on other classes of pre-IPO stakeholders like Key Management Persons ("KMPs") and Directors, among others. Due to this, there are still regulatory gaps which have resulted in the Securities and Exchange Board of India ("SEBI") coming out with a consultation paper, seeking to amend the provision related to pre-IPO dematerialization compliance in order to include more categories of market players to ensure greater transparency and fairness with regard to the listed enterprises. The current framework is broadly in line with the Companies Act, 2013, Section 29, Section 42, and Rule 9A, 9B of the Companies (Prospects and Allotment of Securities) Rules, 2014; SEBI LODR Regulations 31(2), and Circulars, and therefore is conducive. SEBI's proposal helps create a streamlined, uniform, and fully dematerialized capital market from both a legal and economic viewpoint, helping close the regulatory gaps are being addressed by this consultation paper.

II. GENERAL COMMENTS: -

The proposal by SEBI to require dematerialization ("**demat**") for a larger group of pre-IPO shareholders is a major step in enhancing the capital markets' efficiency, openness, and investor protection. The projected extension intends to solve ongoing governance issues brought on by

residual physical shareholdings among promoters, workers, and heritage investors, even though dematerialization is well-established under Indian securities law.

In terms of economics, the activity is consistent with the Efficient Market Hypothesis ("EMH") and transaction cost economics. Physical share certificates put investors at risk of loss, forgery, or misplacement, in addition to incurring significant operating costs for printing, storing, and couriering. Electronic records, on the other hand, allow for quicker and more precise transfers, which lowers bid-ask spreads and improves liquidity. Dematerialization also makes it possible to monitor trades and commitments in real time, improve transparency, and lessen information asymmetry. This is crucial during the IPO lead-up, when there is a significant danger of moral hazard and adverse selection.

The proposal does not establish obligations; rather, it expands them. Demat issuance and promoter compliance are mandated by Section 29(1) of the Companies Act, 2013, and Rule 9 of the Companies (Prospectus and Allotment of Securities) Rules, 2014. Demat standards are further extended to large private corporations and unlisted public companies by Rules 9A and 9B. Physical shares of listed companies cannot be transferred, as stated in SEBI Regulation 40(1). In order to close gaps and improve market hygiene, the new plan extends this regime to pre-IPO staff, early investors, and small promoters.

SEBI should encourage Basic Services Demat Account ("**BSDA**") adoption, allow IPO filings when significant conversion is finished, and offer cure periods in order to facilitate the changeover. Frictions may be further decreased by exemptions for immaterial holdings, streamlined conversion drives, multilingual assistance, and bulk onboarding. Government and international stockholders may require special treatment. Such backing will enable SEBI's reform to fulfill its promise of modernizing India's capital markets.

The due diligence, as well as the regulations like Fast Track issues (Regulation 155 of SEBI ICDR, 2015) and IPO norms, which are focused on SMEs, lower entry barriers for investors, and increase competition in the market. The price regulation (Regulations 164, 166A of SEBI ICDR, 2015) ensures that the public resources and investment money are not diverted or misused by overvalued issuers, thus reducing the inherent biases and helping in the better allocation of the capital invested.

The impact becomes better in the form of more competitiveness between all issuers by creating a uniform field for all.

- The Coase theorem posits that when property rights are well-defined and transaction costs are low, individuals can negotiate and reach an efficient outcome in disputes over resource allocation, even in the presence of externalities, without needing government intervention. It suggests that the efficient outcome is determined by who has the right to use the resource, not by the initial allocation of property rights. This theorem can be applied to the regulations and proposals mentioned, which prove that dematerialization reduces the high transaction costs of physical shares, which involve manual transfer, risk of forgery, and an extended period of time. This leads to more efficient markets and lower cost of capital for issuers and more net returns for investors.
- The agency theory, which focuses on the optimal form of contract to control relationships between a principal and an agent, addresses the challenges that arise when the principal and agent have different goals and risk preferences. It can also be applied to these new regulations, wherein conflicts may arise between agents or managers as they may act selfishly, which will not be beneficial to principals or the shareholders. So, the Demat holdings for KMPs, as mentioned under Section 2(51) of the Companies Act, 2013, directors and promoter groups improve traceability and accountability as it would reduce misuse and loss to either party. Externalities like side deals or hidden ownership structures will reduce and corporate governance will be increased thereby reducing agency costs.

| Cost Component | Explanation |
|----------------------------|--|
| Demat Account Opening Fees | Fees vary depending on which platform is used, ranging from 0-1000 Rupees |
| Annual Maintenance Charges | Charges vary from 300-900 Rupees per year |

Costs incurred in Pre IPO process:

| Stamp Duty & GST | Minimal Charges, insignificant at the holding stage |
|---------------------------------|--|
| Documents | KYC, PAN linking, address proofs, Aadhar 1-2 days |
| Time Cost | Administrative delays, document collection, approvals 2-3 days |
| Legal & Advisory Fee | If succession or trusts 2-4 weeks |
| Verification and account set up | 3-7 working days (may vary) |

- ➤ Total time cost depending on efficiency is estimated to be around 1-4 weeks.
- ➤ Estimated one-time cost per individual would be around Rs. 1500-1700.
- ➤ Recurring annual cost would be Rs. 300-900.

Cost Reduction Options:

| Mechanism | Rationale | Economic Rationale |
|---|--|---|
| Bulk Demat Facilitation by Issuer | Issuer companies can coordinate with depository participants for all the KMPs and directors. | Economies of scale, reduction in transaction costs of individuals |
| Fee waiver through depositories | NSDL/CDSL can be encouraged to offer bulk demat creation support to IPO bound firms as part of "capital market digitization". | Pigouvian Subsidy to correct under adoption (less adoption) |

| Auto link to ESOPs | Many KMPs and directors hold shares from ESOPs, demat conversion with a streamline process at the level of giving ESOPs will help. | Simplifies and smoothens process of onboarding of large number of employees |
|----------------------------|--|--|
| Aadhar and E Signatures | Expediting the KYC process and reducing administrative time and cost by e signatures. | Reduces search and administrative costs |
| Pre- IPO Compliance | Allowing issuers to track demat status through SEBI or the stock exchange where the company is to be listed. | Reduces coordination issues and lapses |

III. SPECIFIC COMMENTS: -

| 3 | Mandatory dematerialization | We suggest the creation of an automatic ESOP-linked demat | rights are exercised or contracts expire, dematerialization ensures transparency and promotes systemic stability. A general requirement that all workers dematerialize their |
|---|---|--|---|
| | of shares held by domestic current employees and ESOP grantees prior to IPO filing. | facilitation mechanism embedded in issuer workflows at the grant stage. We also recommend exemptions or compliance deferrals for holders of illiquid or vesting-contingent ESOPs. | holdings, independent of vesting or transferability status, may result in disproportionate administrative burdens, even while SEBI's intention to provide complete traceability in pre-IPO shareholding is commendable. Many employees might possess non- transferable, illiquid, or unvested stock options that are never exercised or vested. Legal compliance requirements and economic realities are not aligned when dematerialization is mandated for such dependent rights. Legal enforceability and value realization are at odds as a result of this, according to economics and law: workers must invest time, money, and |

| effort into transforming paper |
|--------------------------------|
| entitlements into electronic |
| form long before any tangible |
| financial interest appears. |
| manetal merest appears. |
| Linking dematerialization |

| | | standards to concentrate |
| | | regulatory efforts on |
| | | economically significant |
| | | interests. |
| Introducing a tiered compliance roadmap with clear interim deadlines tied to key IPO milestones, coupled with digital tracking mechanisms to ensure seamless implementation. It will ensure specific compliance timelines or phased enforcement mechanisms for the proposed dematerialization requirements. This creates significant implementation implementation implementation | The current proposal lacks structured timelines, creating uncertainty for issuers and stakeholders navigating IPO preparations. To address this, we recommend a tiered compliance roadmap with phased deadlines tied to key IPO milestones. High- impact stakeholders like promoters, directors, and KMPs should comply two months before DRHP filing, as they typically hold significant pre-IPO shares and influence corporate governance. Institutional investors, including QIBs and selling shareholders, should follow one month before RHP filing, allowing sufficient coordination time without clashing with due diligence workloads. Employees and retail shareholders, who often lack dedicated compliance support, should be given until the listing date to dematerialize, minimizing disruption while ensuring eventual | A phased approach aligns with transaction cost economics, preventing systemic bottlenecks that arise when heterogeneous stakeholders— from institutional investors to retail employees—rush to comply simultaneously. By staggering deadlines, the proposal reduces coordination costs, spreads operational burdens over time, and allows network effects to take hold (e.g., promoters' early compliance sets a template for others). Legally, this mirrors Rule 9A of the Companies Act, which mandates gradual dematerialization for unlisted companies, ensuring regulatory consistency. From a risk mitigation perspective, clear timelines prevent last- minute scrambles that could |

monetary fines to offer document rejection and should promoter debarment, coupled with robust verification systems including real-time digital audits and merchant banker Fourth. certifications. The suggested measures be are carefully designed to SEBI's leverage existing statutory authority while introducing necessary deterrence teeth mechanisms that both align with economic theory and global regulatory best practices.

Third, clear materiality thresholds should be established to distinguish between technical and substantive violations, focusing enforcement resources where they matter most - particularly on promoter/KMP/QIB compliance and bulk physical share holdings.

complementary whistleblower provisions should introduced, including а dedicated reporting portal and financial incentives for valid violations reports, creating additional of market layers surveillance. These measures collectively ensure the dematerialization mandate has while remaining operationally feasible for all stakeholders.

investor protection imperative is clear - physical shares create measurable risks including fraudulent transfers and governance opacity that directly harm public investors, while consistent enforcement creates necessary market discipline.

From a market efficiency standpoint, the framework prevents a "race to the bottom" in compliance standards while supporting accurate price discovery by reducing information asymmetry about issuer quality.

Global precedents from the US SEC's automatic "bad actor" disqualifications to the UK FCA's listing suspensions demonstrate the effectiveness of such concrete enforcement mechanisms. Operationally, the proposal cleverly leverages India's existing depository infrastructure and merchant banker workflows, minimizing implementation
